

## **Weathering and UV Influence**

15<sup>th</sup> June 2021

To Whom It May Concern:

Silicone rubber has excellent resistance to environmental conditions, making it the ideal material to be used for outdoor sealing applications that may be exposed to the elements.

Silicone can withstand Ozone and UV stresses which allows the material to maintain its original properties and prevent degradation. Silicone also has excellent resistance against general weathering from rain, sleet, snow and frost allowing protection to electrical enclosures situated outdoors.
