

## **Film Joining**

15<sup>th</sup> June 2021

## To Whom It May Concern:

The Process of 'film joining' uses a film of silicone rubber compound rather than a silicone adhesive which is placed between the matching parts and cured with pressure and heat to form an extremely strong joint.

This process lends itself to straight butt joins and angled corner joins. The strength of the bond far exceeds that of an adhesive product.

Unit 4 & 5, Broxhead Trad Est, Lindford, Bordon, Hants, GU35 OJX Tel: + 44 (0) 1420 470360 Fax: + 44 (0) 1420 472802
