

## **Shelf Life of Silicone Products**

15<sup>th</sup> June 2021

To Whom It May Concern:

Our solid and sponge silicone products which are extruded, moulded, calendared or fabricated would in general have a shelf life of a minimum 10 years in accordance with ISO 2230:2002 Group C and table 4.

Exceptions to this are adhesive backed products which will be limited to 12 months.

Further exceptions will be RTV adhesive and moulding compounds which typically have their shelf lives printed on the relevant tubes or containers.
