

Statement on Food Allergens

15th June 2021

To Whom It May Concern:

We herewith confirm that our silicone rubber products, sponge and solid are composed entirely of synthetic and inorganic materials, primarily: silicone polymers, mineral fillers and metal oxides.

Whilst we do not conduct any specific testing or screening on allergens (and therefore cannot exclude the possibility of trace levels), no organic materials including animal or plant products are used in the production of our silicone materials, nor are they used at our production facility.

We can therefore say there are no raw materials used that are at risk of containing any food allergens, and additionally there is little risk of cross-contamination at our production facility.

This means to the best of our knowledge none of the following food allergens—as defined by EC2003/89/EC -are present in any of Silex Ltd.'s products (solid and sponge silicone): celery/celeriac; cereals that contain gluten; crustaceans' eggs; fish; lupin; milk; molluscs; mustard; nuts; peanuts; sesame seeds; soya; sulphur dioxide (sulphites).
